Math Worksheet 1

Name: **Answer Key**

Supply the missing value in the equation:

$25 + \underline{6} = 31$	$\underline{76} + 9 = 85$
$\underline{46} + 9 = 55$	$67 + \underline{2} = 69$
$97 + \underline{8} = 105$	$82 + \underline{6} = 88$
$92 + \underline{8} = 100$	$\underline{43} + 6 = 49$
$\underline{63} + 4 = 67$	$\underline{12} + 3 = 15$
$82 + \underline{9} = 91$	$\underline{96} + 7 = 103$
$25 + \underline{5} = 30$	$\underline{47} + 6 = 53$
$79 + \underline{6} = 85$	$33 + \underline{7} = 40$
$92 + \underline{7} = 99$	$40 + \underline{3} = 43$
$95 + \underline{5} = 100$	$\underline{75} + 4 = 79$

Standard Deviation of a Sampling Distribution VS Standard Error

$$SD(\hat{p}_1 - \hat{p}_2) = \sqrt{\frac{p_1 q_1}{n_1} + \frac{p_2 q_2}{n_2}}$$

Hypot

$$SE(\hat{p}_1 - \hat{p}_2) = \sqrt{\frac{\hat{p}_1 \hat{q}_1}{n_1} + \frac{\hat{p}_2 \hat{q}_2}{n_2}}$$

Standard form equation addition. What is addition equation. Standard addition equation chemistry. Single point standard addition equation. How to do standard addition calculations.

The effects of the matrix occur even with m everyone, such as plasma spectrometry, who has the reputation of being relatively free of interference. Then the pattern is added in different quantities, such as 0, 1, 2, 3 and 4 ml. Note This value is the dilute concentration. Bottles are now diluted for brand and well mixed. (June 1999). The point at zero concentrates the reading of the unknown, the other points are the readings after addition of increasing amounts (peaks) of standard solution. This value is given by B/A, proposing the intercept and the slope of the return line. 57 (10): 703. Error [3] The interception X gave the concentration of the unknown. The absolute value of the X-intersection is the concentration of AC in the unknown, in this case 1.69E-6 g/ml. Using the whole of the calibration curve, an analyst can calibrate the spectrometer with some aqueous solutions of a pure silver salt and use the resulting calibration graph in determining the silver in the test samples. In the above Procedure, 10 ml of unknown was diluted to 25 ml. (August 2014) (Learn how and when to remove this template message) How to make an example of default plot pattern. Bader, Morris (1980). This method is all used in a situation where the sample matrix also contributes to the anal sign, a situation known as the matrix effect, making it impossible to compare the anal sign between sample and pattern using the traditional approach of the calibration curve. [1] Adjustments The standard addition is often used in instrumental analysis as a chemical, such as atomic absorption spectroscopy and gas chromatography. [2] Suppose that the concentration of silver in photographic residue samples is determined by atomic absorption spectrometry. Journal of Chemical Education. New York: W.H. Freeman.
$$s_x = \frac{1}{n} \sum_{i=1}^n (x_i - \bar{x})^2$$

$$s_y = \frac{1}{m} \sum_{i=1}^m (y_i - \bar{y})^2$$

$$m$$
 is the slope of line b
$$b = \frac{s_{xy}}{s_x}$$

$$n$$
 is the number of patterns
$$\bar{y}$$
 is the average measurement of patterns
$$x_i$$
 are the concentrations of the patterns
$$\bar{x}$$
 is the average concentration of the patterns. As usual, the signal is plotted on the y axis; in this case, the x-axis is graded in terms of the quantities of analyte added (either in absolute weight or concentration). If the signal response is linear in this concentration range, then a graph similar to that shown above is generated. The detector response must be a linear function of the concentration of the substance to be analysed

and produce no signal (except background) at the zero concentration of the substance to be analysed. "Precision Estimates in a Standard Addition Analysis." Similarly, gas chromatography uses the following procedure: 1) The unknown chromatogram is recorded 2) a known quantity of the analyte (s) concerned is added 3) the sample is re-analyzed under the same conditions and the chromatogram is recorded. Experimentally, equal volumes of the sample solution are taken, all but one being separately from the sample solution This graph is an example of a standard addition graph used to determine the concentration of carbon dioxide, on a sample unknown by atomic absorption spectroscopy.
